

Leead Jacobowitz

BACKEND ENGINEER

leead123@gmail.com · 054-645-6416 · [LinkedIn](#)

Backend engineer specializing in .NET and C#, with production experience building microservices and REST APIs for financial systems. At Credito, I designed and shipped backend features handling real-time financial workflows, built internal automation tooling that eliminated hours of manual work, and debugged live production issues across distributed services. I bring a strong foundation in computer science and a drive to understand systems end-to-end.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET, ASP.NET Core, Entity Framework Core
Backend & Data: REST APIs, Microservices, Dependency Injection, SQL Server
Infrastructure & Automation: Docker, Kubernetes, AWS, Ansible, Git, n8n
Also familiar with: Python, Java, C/C++ (academic)

PROFESSIONAL EXPERIENCE

Backend Engineer — Credito	Oct 2024 – Present
Stack: C#, .NET, ASP.NET Core, SQL Server, EF Core, Microservices, n8n	
- Designed and implemented backend microservices powering financial credit workflows in a .NET-based production system, handling business-critical request processing. - Independently identified a recurring operational bottleneck in the credit request setup process and, on own initiative, designed and built an internal service that automated it – enabling engineers to dynamically configure requests and reducing setup time to seconds. - Built an AI-powered email processing pipeline using n8n and GPT-4o that automatically classifies incoming emails, extracts structured client and case data, and routes documents for processing – replacing a manual, time-consuming workflow. - Investigated and resolved real-time production incidents by debugging distributed backend services, improving system reliability and reducing downtime. - Identified inefficiencies in business workflows and proposed backend solutions that streamlined operations for cross-functional teams. - Collaborated with cross-functional and international teams to align on requirements, design APIs, and deliver features across service boundaries.	
Frontend Engineer (Student) — Post AI	Sep 2023 – Feb 2024
Stack: TypeScript, React, HTML, CSS	
- Built and maintained UI components for a desktop application using React and TypeScript, contributing to core feature development. - Collaborated with a remote international engineering team to ship features and improve application workflows.	
Software Support Engineer (Student) — Bright Machines	Sep 2022 – Jul 2023
Stack: C#, .NET, Docker, Kubernetes, AWS, Ansible	
- Analyzed and troubleshooted issues across integrated software systems, identifying root causes spanning multiple components and services. - Performed system stability and validation testing to ensure reliability in a production-like environment using Docker, Kubernetes, and AWS.	

EDUCATION

B.Sc. in Computer Science & Mathematics (Data Science Program)

Ariel University

2020 – 2023

MILITARY SERVICE

Combat Commander + Officer

2016 – 2019

Flight Academy Participant

2015 – 2016
